Original project name: Synthetic retained opening QA

Original model revision: 4 / design revision: A

Selected level: Ground / identity: 0baf07a7-41a0-41e0-9429-a692558eedbf / view: plan

Geometry review reference (full): Synthetic retained aperture review page 1

Session review declares existing/repaired geometry unchanged across stages. This reference is not a verified survey or a historical issue basis.

Shared annotations: notes, room tags, grids, drafting marks and section position come from the current all-work project. They have not been independently classified by alteration stage.

Retained apertures are labelled VOID. They cut the wall but contain no door or window fixture. Explicit demolition disposition references are preserved in attached alteration-review.json; no infill is inferred.

No construction quantities, material procurement, disposal allowances, compliance approval or issued-history claim is made. Shared-volume ownership between classifications remains unresolved.

Text encoding: unsupported glyphs/control characters use explicit Unicode escapes such as \u{1f600}; literal backslashes are doubled. Full original Unicode identity/reference and drawing labels are preserved in attached alteration-review.json. Long drawing labels are visibly marked [...] when shortened; review the attachment.

The drawing keeps its declared scale; geometry outside the selected viewport may be clipped. Print at 100%. Review the complete stage model before relying on a detail.

PROPOSED ALTERATION / DRAFT / NOT ISSUED / NOT FOR CONSTRUCTION / original model revision 4
Project identity: job-31c46f56-bf3f-419f-bed3-b23d42061ace
Review e91072975c72c81a1072 / full reference: review notes and attached alteration-review.json
Shared annotations are current, not stage-reviewed. No issued-history or material-quantity claim.
